SUMMARY

Senior Frontend Developer with 5+ years of experience building large-scale, production-grade React/TypeScript applications for the fintech and BNPL (Buy Now Pay Later) sector. Specialized in scalable feature-sliced architectures, state management (Redux Toolkit/Saga, TanStack Query), real-time systems (WebSocket), and performance optimization for high-traffic consumer platforms serving 100,000+ users. Proven track record of leading architecture decisions, mentoring within feature teams, and shipping multiple fintech products in parallel across a shared monorepo ecosystem. Comfortable driving product decisions alongside Product and Design, not just implementing designs. Currently deepening Next.js/SSR expertise through an active personal project, building on daily production use of Vite and existing React/TypeScript architecture experience.

SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React 18/19, React Router v7

State & Data Management: Redux Toolkit, Redux-Saga, RTK Query, TanStack React Query v5, Axios

Forms & Validation: React Hook Form, Zod, custom multi-step form architectures

Build & Tooling: Vite, Next.js (in progress), Webpack 5, Babel, pnpm Workspaces (Monorepo), SVGR, Terser

Styling: Ant Design, Emotion (CSS-in-JS), Tailwind CSS, Less/SCSS, CSS Modules, PostCSS, BEM/Anatomy patterns

Testing & Quality: Jest, Vitest, React Testing Library, Mock Service Worker (MSW), ESLint, Prettier, Husky

DevOps & Infra: Docker (multi-stage builds), Nginx, CI/CD, Git, Conventional Commits

Integrations: WebSocket (real-time), i18next (i18n/RTL), Insider, Google Tag Manager, Adjust SDK

Collaboration & Design Handoff: Figma (design-to-component implementation, design system collaboration), Jira, Confluence

AI Tools: Claude, Google Antigravity, Cursor

PROFESSIONAL EXPERIENCE

Senior Frontend Developer

Jul 2024 - Jun 2026

ParamTech — Ankara, Turkey

- Architected a feature-sliced monorepo (Bulletproof React methodology, pnpm Workspaces) spanning 29 isolated feature modules across the Kredim Backstage admin platform, clarifying code ownership and reducing new-hire onboarding time.
- Built a type-safe, centralized data layer using TanStack React Query v5 and query-key-factory, standardizing server-state caching and cache-invalidation strategy across the platform's 29 feature modules.
- Designed a reusable MutationForm compound component and a 7-step multi-step form (React Hook Form + Zod) for campaign creation, standardizing create/update flows across 20+ form pages and increasing new-form delivery speed.
- Implemented a declarative, route-level permission system (RouteGuard + centralized permission maps), securing 40+ protected routes from a single auditable source of truth.
- Delivered Kredim Checkout, an embeddable credit-payment flow that lets users pay with Kredim credit from within third-party e-commerce and banking partner apps, including in-flow campaign/installment selection and an SMS-triggered deep-link recovery mechanism for interrupted transactions.
- Built Kredim Merchant, a partner-facing panel enabling merchant businesses to extend Kredim credit directly to their own customers, and extended the same modular React/TypeScript architecture to deliver Param Backoffice across ParamTech's fintech product suite.
- Partnered directly with Product and Design on scope and UX decisions rather than just implementing handed-off designs, using Figma for component and design-system collaboration and Jira/Confluence for sprint planning and code review.

Frontend Developer

Sep 2021 - Jul 2024

ParamTech — Ankara, Turkey

- Engineered the Kredim Member Panel, a large-scale BNPL consumer application (React 18, TypeScript, Redux Toolkit, Redux-Saga) serving 100,000+ users across three multi-tenant modules (Kredim, Hopi, Partner), including credit-tracking and payment flows for 3D Secure, saved/new-card, EFT/wire-transfer, and Kredim Wallet.
- Designed a hybrid state-management strategy combining Redux Toolkit slices with 15+ domain-specific Redux-Saga flows (auth, loans, cards, KYC, payments, WebSocket), including a dual-token Axios interceptor for standard and partner-based authentication contexts.
- Built a production-grade WebSocket client with jittered exponential-backoff reconnection logic and a composable listener pattern, delivering reliable real-time notifications without memory leaks.
- Delivered a full i18nnext-based localization system with RTL layout support for the Arabic market, and implemented a command-queue pattern for GDPR/KVKK-compliant analytics (Insider, GTM, Adjust).

KEY PROJECTS

- **Kredim Member Panel** — Consumer BNPL platform for managing credit limits, cards, and financial scores, supporting 3D Secure, saved/new-card, EFT, and wallet payments. React 18, Redux Toolkit/Saga, RTK Query.
- **Kredim Checkout** — Embeddable checkout flow letting users pay with Kredim credit inside third-party e-commerce and banking partner apps, with campaign/installment selection and SMS-based transaction recovery.
- **Kredim Merchant** — Partner-facing panel enabling merchant businesses to extend Kredim credit directly to their own customers.
- **Kredim Backstage** — Internal admin panel with 29 feature modules for campaign, KYC, and permission management. React 19, Vite, TanStack Query, monorepo.
- **Param Backoffice** — Additional fintech product built on the same feature-sliced React/TypeScript architecture and shared component libraries.

EDUCATION

B.Sc. in Electronics and Communication Engineering (English)
Cankaya University, Ankara

2013 – 2019

CERTIFICATIONS & TRAINING

React Bootcamp — Kodluyoruz (Jun 2021 – Sep 2021): HTML5, CSS3, JavaScript, and React.js application development.

LANGUAGES

Turkish — Native | English — Professional Working Proficiency
